RESTRUCTURING THE SPOT PROGRAM

Integrating SPOT, Risk-Based Security and Managed Inclusion; Suggested changes to SPOT

ADSA 12, Boston, MA

May 12, 2015

SPOT Program Challenges

- Defensibility and budget cuts
- Gradual reduction in number of airports in which BDOs are deployed
 - 176 in 2013 → 122 in 2014 → 87 in 2015
- Focused mostly on Cat X and Cat I airports (most cuts at smaller airports)
- SPOT science continuously questioned (e.g. GAO 2010 and 2013, OIG 2013, S&T AIR Validation Study 2007-2011)
- Effectiveness measurability
- Difficult business case
 - Compared to PSP annual budget at ~\$180M
- Hard to quantify security benefits

Source: TSA data²

* Passenger throughput estimated at more than 450 airports, of which 176 use SPOT.

Current BDO CONOPS

Current Pre✓™ Status

TSA Pre✓™ program lists 7.2 million travelers as of March 2015

U.S. Customs and Border Protection (CBP) Trusted Traveler programs 3,468,936	Department of Defense (DOD) active duty 1,915,893	DOD civilians 767,269	(Empty)
--	---	---------------------------------	---------

A list of eligible individuals enrolled in one of CBP's Trusted Traveler programs (Global Entry, NEXUS, SENTRI) who have undergone a background check and an interview by CBP and who wish to participate in TSA Pre✓™.

A list of eligible DOD service members, including active duty, National Guard, reserves, and U.S. Coast Guard, who wish to participate in TSA Pre✓™.

TSA Pre✓™ Application Program
944,961

A list of individuals who apply to the TSA Pre✓™ Application Program to be preapproved as low-risk travelers. TSA conducts a background check to determine if an applicant should be included on this list.^a

National intelligence agencies A list of individuals employed by national intelligence agencies with active top secret (TS)/sensitive compartmentalized Information clearances who wish to participate in TSA Pre✓™.	76,265	Medal of Honor recipients	79
TSA employees (federal)	33,913	National Fusion Center Association A list of eligible state and major urban area fusion center directors who wish to participate in TSA Pre✓™.	69
Department of State (TS cleared)	14,096	International Association of Chiefs of Police	54
Federal judges/federal tax court judges	1,494	Homeland security advisors	58
Members of Congress	434	Homeland Security Advisory Council	17
		Aviation Security Advisory Committee	10

Managed Inclusion

- In 2013 TSA launched MI intended to provide expedited screening to passengers not deemed as low risk prior to arriving at airport (KT)
- Random addition of percentage of passengers
- Mitigating potential risk by random, BDOs, K-9 and ETD screening of MI passengers
- Had negative impacts on overall SSCP throughput
- Questions about security effectiveness (e.g. GAO 2015)
- Further evaluations being conducted

New BDO / MI Concept – Description and Assumptions

- **Apply ~1450 BDOs out of ~2800 to TDCs stations**
 - Assumed increasing total TDC capacity by 100% to 2900
 - CAT FOC at 1450; 2,215 checkpoint lanes nationally
- **BDO average interaction time of 30-45 sec at TDC**
 - Short targeted interview focused on establishing lack of suspicious behavioral, appearance, and fraudulent documentation indicators similar to Israeli BDO (and using same BDO/TDC function as in the Assessor Pilot)
 - Start with “presumed” low-risk populations (e.g. families with established ties, children below 12, elderly above 75, etc.) and expand if and as needed
 - Increase from current average TDC interaction time (~10-12 sec) can be mitigated with additional TDC positions
- **Changed demand vs. capacity – passenger peak flow analysis**
 - Increase in peak flow demand (with more TDC positions) “absorbed” by longer interaction time at TDC and by extra screening capacity provided by more high-throughput Pre[√]TM lanes

Proposed New BDO / MI Concept – Description and Assumptions

- **Deterrence factor**

- Given that more BDOs interact with ALL passengers at TDC (with added “covert” BDO functioning under regular SPOT) it is likely that the deterrence factor of the new BDO / MI SOP will be higher
- However, effectiveness of deterrence is difficult to measure and hard to quantify

- **Maintain regular SPOT program**

- BDOs performing the current SPOT SOP (or optimized SOP) are an important security layer in detecting malicious intent and thus high-risk passengers
- This important function should be maintained with part of the BDO workforce
- Successful implementation of new BDO / MI concept can help maintain (and hopefully increase) SPOT budget and resource allocation

Proposed New BDO / MI Concept – Challenges and Risks

- **Scientific basis needs to be established**

- Is it indeed more cost-effective (throughput, Pd, Pfa) to establish lack of malicious intent than to establish malicious intent?
- Is that the same behavioral phenomena (two sides of the same coin)?
- Needed training for BDOs experienced in current SPOT?
- ODNI's IARPA TRUST 2010 Program may be the scientific foundation needed!

- **Cognitive load concerns**

- Mitigate expected increase in cognitive load for BDO/TDC staff by use of more TDC and SPOT automation (e.g. broader capability of CAT-BPSS, BDO tech.)

- **SSCP lane utilization**

- As Pre $\sqrt{\text{TM}}$ base expands (geographical expansion of KT and suggested MI) to goal of 90% passenger base, more Pre $\sqrt{\text{TM}}$ lanes are added replacing regular lanes
- But, dedicated Pre $\sqrt{\text{TM}}$ lanes can be underutilized and less efficient especially during regular passenger peaks not necessarily synced with Pre $\sqrt{\text{TM}}$ peaks
- Consider dynamic regular/Pre $\sqrt{\text{TM}}$ lanes to improve utilization

Proposed New BDO / MI Concept – Challenges and Risks (Continued)

- **Defensibility**

- Will / can ad-hoc BDO-driven MI be challenged by civil rights / privacy groups?
- Subjective inclusion criteria may be seen as unfair or exclusionary to some passengers?

- **Significant level of effort for TSA**

- Establishment of scientific basis can be time-consuming and costly (but hopefully the significant scientific bodies of work on SPOT and/or ODNI IARPA TRUST program are applicable)
- Piloting and developing test and evaluation metrics and plans will take time
- Socialization efforts of new concept will require additional efforts

Bottom Line – So what? Why Should We Care?

- This can help TSA reach much higher Pre \sqrt TM passenger base and drive significant throughput and passenger experience improvements nationwide
- This can help TSA meet Congressional mandates and further drive required staffing efficiencies through better leverage of the established RBS culture
- This can be a better way to defend the critical BDO program and maintain (or increase) it's current funding and resource levels
- Finally - IS THIS NOT WORTH FURTHER EXPLORATION?

Executive Summary

SPOT Program - Challenges

- **RBS** - TSA Pre[√]TM passenger base reached 50% in 2014 but end-goal is ~90%!
 - How do we get there? Geographical expansion of KT base may not be sufficient
 - Compare to Ben Gurion airport / EL-AL Security with ~95% low-risk passenger base
 - Scalability and applicability!
- **BDO Effectiveness** - BDO referral success rate is very low (e.g. 2012 - 0.006% BDO referrals, and of those ~37K only 0.5% end in LEO arrests)
 - Hard to measure and prove cost-effectiveness and operational efficiency given low frequency phenomena and CONOPS limitations
 - 2011-2013 Assessor Pilot
 - Optimized SPOT Pilot
 - OSC Stated goal to expand BDOs capability
- **Business Case** - SPOT program average annual budget at ~\$200M with ~2800 BDOs vs. PSP average annual budget at ~\$180M.
 - Cost-effectiveness, defensibility
 - This is why we should care!

Integrating SPOT, MI and RBS

- **RBS and MI** – Use BDOs to ad-hoc “clear” certain low risk PAX into Pre[√]TM
 - Start w/ rule-based (e.g. proven families, elderly)?
- **New BDO CONOPS** – short and active interaction (30-45 sec) with some/all passengers at TDC to ascertain low-risk (use behavior, appearance and documentation indicators)
 - Similar to Assessor pilot BUT with ~2800 BDOs more TDCs can be deployed using BDOs to man them (to offset throughput impacts)
 - Re-establish SPOT science (detection of lack of malicious intent) – is it more defensible?
 - ODNI’s IARPA TRUST 2010 Program
 - Increase SPOT Pd, reduce Pfa with active interaction (compared to passive queue combing)
 - Address increase in cognitive load by use of more TDC/BDO automation (CAT-BPSS, BDO Tech.)
- **Cost-Effectiveness** –new BDO effectiveness measurable using clear RBS KPPs (e.g. throughput increase/BDO, Pd)
 - Program cost becomes more defensible
 - Some “traditional BDOs” kept as a security layer
 - Deterrence increased (but is it measurable?)
